👤 PROFILE

B.Tech Data Science student at **NMIMS** with hands-on experience in **Python, SQL, machine learning**, and analytics through real-world internships and production-scale projects. Strong in **data modeling, visualization**, and **problem-solving** with exposure to **end-to-end machine learning pipelines and analytics workflows**. Outside of academics, I cultivate focus, discipline, and creativity through my hobbies in **lawn tennis** and **drumming**.

🎓 EDUCATION

B.Tech in Data Science, NMIMS, Mumbai | 2023 – Present

Diploma in Computer Science, NMIMS, Mumbai | 2021 – 2023

ICSE (10th), Pawar Public School, Mumbai | 2020

🧠 SKILLS

Programming: Python, Java, C, C++, R

Data Science & ML: Pandas, NumPy, Scikit-learn, Statistics, Probability, Decision Trees, Random Forest, XGBoost, CatBoost, Gradient Boosting, LightGBM, Bag of Words (BoW), Cosine Similarity, Pickle

Data Visualization: Power BI, Tableau, Matplotlib, Seaborn

Databases & SQL: SQL, Trino SQL, MySQL, PostgreSQL

Tools & Platforms: Excel VBA, Git, Streamlit

Web & App Dev: HTML, CSS, Android Studio

🏆 CERTIFICATIONS & ACHIEVEMENTS

Python Gold Badge: HackerRank • **C++ Bronze Badge:** CodeChef •

Data Structures & Algorithms: Udemy • **Python Programming:** Udemy •

Java Programming: Edureka

🏠 EXPERIENCE

Customer Churn Prediction & Behavior Analysis – JioSaavn Internship (2 months, full-time)

Objective: Analyze large-scale music streaming behavior to predict customer churn and enable data-driven retention strategies by developing a ML model and other analysis methods.

- Queried and processed **large-scale customer behavior data** using **Trino SQL** in an agile, iterative analytics environment across distributed analytics systems.
- **Engineered statistical features and applied statistical modeling techniques** to train and evaluate a LightGBM machine learning model for churn prediction
- Applied **probability-based risk segmentation** to classify millions of users into churn-risk deciles, enabling **quantitative decision-making**.
- Built **interactive HTML analytics dashboards** and uncovered insights where high engagement indicated **trial usage rather than long-term retention**, enabling **quantitative decisioning** for retention strategies.

Data Science Intern – Durlax Top Surface Ltd. (via Step Up Consultancy) (3 months, part-time)

Objective: Enable business stakeholders to analyze company shareholding patterns and sales performance through data-driven insights, interactive dashboards, and analytics-driven sales incentivization strategies.

- Developed a web-based analytics application **in an agile delivery setup**, iterating on features based on stakeholder feedback while maintaining strong discipline around data governance, data protection, documentation standards, and code quality.
- Designed and implemented **Power BI dashboards** to analyze **sales performance metrics**, identify trends, and support **salesforce incentivization and performance optimization strategies**, delivering outputs within defined timelines.

Python, ChatGPT & AI Coaching – Vatsalya Trust Skill Development Centre

- Delivered **hands-on Python training** to 30+ students across 21-day intensive programs for two consecutive years.
- Conducted seminars on **ChatGPT, Generative AI, and real-world AI applications**, emphasizing practical problem-solving and responsible AI usage.

PROJECTS

Automated Exam Timetable Generation System – For University (Python)

Objective: Reduce 40-day manual exam scheduling effort across 15+ branches and 100+ subjects by building an intelligent, automated scheduling system.

- Designed and developed an **automated Python-based scheduling system** that reduced timetable creation time from **40 days to a few minutes**, eliminating student–subject conflicts across multiple programs.
- Implemented **dynamic scheduling and conflict-resolution logic** by parsing master Excel inputs and enforcing **subject combinations, batch constraints, and program-specific academic rules**.
- Built **data processing and transformation workflows** to ensure accuracy, consistency, and reproducibility of scheduling outputs.
- Automated generation of **structured PDF timetables** and initiated development of a **web-based dashboard** for real-time, centralized management by academic administrators.

Stock Market Analyzer (Python, Pandas, NumPy, yfinance, openpyxl)

Objective: Help investors identify accumulation/distribution trends using historical stock data from NSE/BSE.

- Developed a **Python-based analytical application** using **EMA and volume-based indicators** to analyze stock price behavior, integrating financial logic with real-world market trends.
- Automated **data ingestion, cleaning, and processing pipelines** using Pandas and yfinance, and generated **dynamic, formatted Excel reports** with openpyxl and xlswriter; currently extending the system into a **cloud-based real-time analytics dashboard**.

Movie Analysis & Recommendation System (Python, Streamlit, NLP, CountVectorizer)

Objective: Analyze movie data and recommend similar movies using content-based machine learning on the TMDB 5000 dataset.

- Built and evaluated **machine learning models** (Logistic Regression, Naive Bayes) achieving **84.12% accuracy**, with feature engineering on budget, genre, and cast data.
- Developed and deployed a **content-based recommendation system** using **NLP (Bag-of-Words, CountVectorizer)** and **cosine similarity**, delivered via an interactive **Streamlit web application**.

Other Notable Projects:

- **Data Comparison Tool (Python):** Built a Python utility to compare large Excel datasets and **identify data discrepancies** for validation and quality checks.
- **Online Voter Management System (DSA, C):** Implemented a **linked-list–based system** emphasizing efficient data handling and algorithmic logic.
- **Portfolio & Exhibition Websites (HTML/CSS/JS):** Developed **responsive web pages** using structured layouts and reusable components.
