SUMMARY

Data Science undergraduate with strong Python and machine-learning foundations, hands-on experience in financial data analysis, and applied ML modeling using real-world datasets. Experienced in building end-to-end analytical pipelines using Pandas, NumPy, Scikit-learn and Streamlit. Interested in solving data-driven problems in fintech and quantitative decisioning systems.

EDUCATION

MPSTME, NMIMS University Pursuing B. Tech Integrated in Data Science Current CGPA: 3.93/4	2024 - 2027
MPSTME, NMIMS University Diploma in Computer Science CGPA: 3.91/4	2021 - 2024
Saraswati Vidyalaya High School and Junior College of Science, Thane SSC: 87.20 %	2021

CORE SKILLS

Technical Skills: Python, C++, SQL, Machine Learning, Deep Learning, Time Series Analysis, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Streamlit, Git, MySQL, Statistics, Probability
Soft Skills: Analytical Thinking, Problem Solving, Communication, Team Collaboration, Leadership, Time Management, Adaptability

PROJECTS

Quantitative Finance Stock Analysis Dashboard - Developed a Python-based interactive dashboard that fetches historical stock data using yfinance, processes and cleans it with Pandas/NumPy, and computes financial metrics such as daily returns, annualized volatility, and maximum drawdown for stock performance analysis. - Built dynamic price and performance visualizations using Matplotlib and Streamlit, enabling users to explore different stocks and time ranges, with the architecture designed for future integration of predictive and portfolio-level analytics.
Stock Price Direction Prediction System - Developed a machine-learning-based stock direction prediction system using Random Forest classification, engineering financial features such as daily returns, overnight gaps, volume change, RSI, moving averages, and price spread from 5 years of historical market data. - Built an end-to-end interactive application that automates data fetching, feature generation, model training, accuracy evaluation, and next-day price movement prediction, deployed through a Streamlit UI with robust handling of market holidays and missing data.
Real-Time Face Detection Application - Developed a real-time face detection system using OpenCV's Haar Cascade classifier, processing live webcam video to identify and localize human faces through grayscale conversion and multi-scale feature detection. - Built an interactive application pipeline that integrates video capture, frame-by-frame inference, and visual bounding-box rendering, with configuration management and extensibility for future face recognition or attendance-tracking modules.

CERTIFICATIONS & ACHIEVEMENTS

Certifications:

- Neural Networks and Deep Learning (Coursera)
- Improving Deep Neural Networks: Hyperparameter Tuning, Regularization and Optimization (Coursera)
- Structuring Machine Learning Projects (Coursera)

Achievements:

- Smart India Hackathon 2025 (Ideathon): Selected as a team member representing the institution and awarded an official Ideathon participation certificate for proposing an innovative solution.

PUBLICATIONS

- **A Compendium of the Latest Erudite Analyses of the Shifting Intricacies Within the Bitcoin Ecosystem**
Co-authored a peer-reviewed research paper analyzing Bitcoin price dynamics and its relationship with traditional financial assets using machine learning models. Examined cryptocurrency risk characteristics, diversification potential, and relevant blockchain security considerations.
